

Cartridge Chisel 2,2 x 1

R245002

These cartridges are designed for the use in **Automated Soldering Processes**.

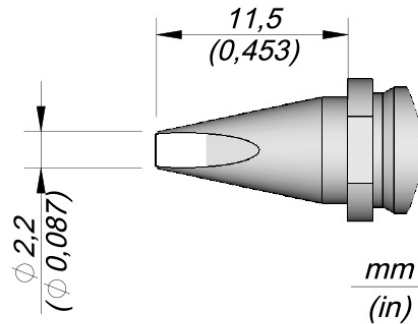

The new cartridge design includes a square cross-section that **centers the cartridge perfectly** into the Soldering Irons and guarantees **precise vertical positioning**.

Due to this square cross-section, the cartridge can be used in 4 different positions, which can be changed in 90° steps.

Cartridges of the Range R245 are available in **different shapes and sizes** and have the same benefits as all the others cartridge ranges.

These cartridges fit to the Soldering Irons TR245 and TRA245.

JBC also offers the possibility to manufacture your special tip geometry. Do not hesitate to ask for.

Specifications

Net weight	0,02 kg (0.04lb)
