GSF Guide Kit for SF280 without Solder Wire Perforation

Changing Guide Kits

Changing Wheels and Blade

For this operation, disconnect the device from the mains. Disconnect the tool from the control unit and open its cover.

Use the Allen key and the spanner, provided with the station. First disassemble the guide tube (6), the support and traction wheels, or the guide wheel, the blade and its clamp (4)+(5). Then, disassemble the nozzles (2)+(3). Disassemble the counter wheel (1) if needed*.

Assembly with Solder Wire Perforation:

Assemble the counter wheel (1) if needed*.

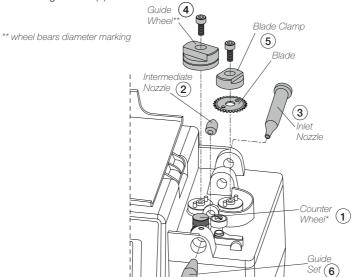

Insert the intermediate nozzle (2) until its collar rests against the housing and tighten the screw.

Assemble the inlet nozzle (3).

Assemble the guide wheel** (4) and tighten the screw.

Assemble the blade first, then mount the blade clamp (5) onto the same axis and tighten the screw. **Caution:** handle the blade carefully to avoid injury.

Insert the guide set (6).

^{*} SF comes with a counter wheel already assembled.

Only change the counter wheel if you want to work with a wire diameter that is outside the working range of the counter wheel already assembled to the SF.

Assembly without Solder Wire Perforation:

Assemble the counter wheel (1) if needed*.

Insert the intermediate nozzle (2) until its collar rests against the housing and tighten the screw.

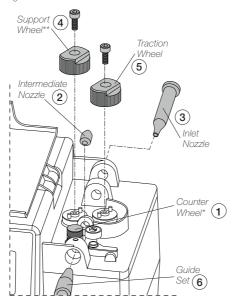

Assemble the inlet nozzle (3).

Assemble the support wheel** (4) onto the axis and tighten the screw.

Assemble the traction wheel (5) and tighten the screw.

Insert the guide set (6).

** wheel bears diameter marking

^{*} SF comes with a counter wheel already assembled.

Only change the counter wheel if you want to work with a wire diameter that is outside the working range of the counter wheel already assembled to the SF.

Outlet Nozzle Replacement

Flux can cause clogging at the outlet nozzle of the guide tube set and it can be necessary to replace the worn or clogged outlet nozzle.

Note: There is a nozzle size for each soldering wire diameter. The use of the nozzle is necessary as its inner diameter is adjusted to the solder wire diameter and guides the wire with greater precision.

To replace the outlet nozzle, follow these steps:

First, unload any remaining solder wire that might still be inside the guide tube (see page 9) and then unplug the tool. Unscrew the spring inwards (2), following the downward direction of the spring.

Once the outlet nozzle is released from the spring, pull the outlet nozzle out (2) and then remove the spring (3).

Place the new outlet nozzle onto the guide tube set (4) and then screw back the spring onto it to fix the outlet nozzle onto the guide tube (5).

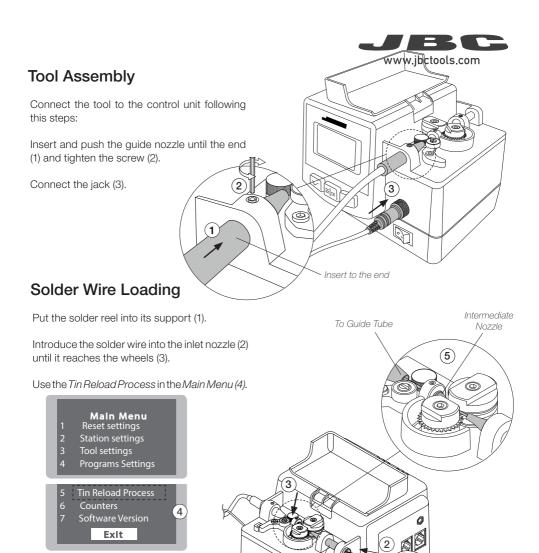

Guide Tube Replacement

To replace the guide tube, follow the outlet replacement steps until reaching no. 3. Once both the outlet nozzle and the spring are removed, open the guide clamp knob (6) and remove the guide tube (7).

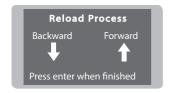

Insert the new guide tube into the tool, close the guide clamp knob to fix it in place and follow steps 4 and 5 to fix the outlet nozzle.

Enter "Tool Settings" at the SF control unit main menu and select the proper wire diameter to complete the process. Main Menu

2 Station settings
3 Tool settings
4 Programs Settings

Inlet /

The Relaod Procees screen opens. Press to start the process.

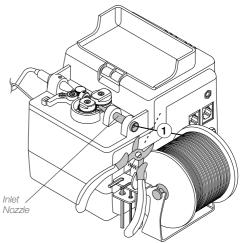

Solder-Wire Unloading

With Solder Wire Perforation

To unload solder wire with perforation that has already passed through the guide tube, cut the wire between the solder reel and the inlet nozzle (1).

To extract the wire out of the tube, hold the tool on your hand and press until the wire stops moving forward.

Grasp the wire coming out of the outlet nozzle with a pliers and pull from it until it is completely out.

With Solder Wire Perforation

When using a guide kit without solder wire perforation, press until the wire is completely wound on the solder reel to unload the solder wire. It is best to rotate the reel by hand as the wire is being pulled back in order to keep it neatly arranged on the reel.

Or, If preferred, proceed as described before for perforated solder wire unloading.

- Guide Tube Length: 126 cm / 49.6 in

- Package Dimensions: 245 x 185 x 45 mm (L x W x H) 9.65 x 7.28 x 1.77 in

Complies with CE standards.

ESD safe

Warranty

JBC's 2 year warranty covers this equipment against all manufacturing defects, including the replacement of defective parts and labour.

Warranty does not cover product wear or misuse. In order for the warranty to be valid, equipment must be returned, postage paid, to the dealer where it was purchased.

This product should not be thrown in the garbage.

In accordance with the European directive 2012/19/EU, electronic equipment at the end of its life must be collected and returned to an authorized recycling facility.
